

\$NILEX

NITROLAYER

ECOSYSTEM

WHITEPAPER

INTRODUCTION

NitroLayer is a next-generation blockchain ecosystem built to redefine the real-world utility of EVM networks.

Through a structure focused on the continuous development of decentralized applications (dApps), seamless multi-network integration, and a robust deflationary economy, NitroLayer establishes an adaptable, scalable infrastructure designed for mass adoption.

ECOSYSTEM PURPOSE

The purpose of NitroLayer is to drive real blockchain adoption through the development of scalable and useful dApps operating on the Base network and other EVM-compatible chains.

Our mission is to deliver a consistent layer of utility that enhances on-chain activity while providing practical tools that create value for users and projects alike.

The ecosystem addresses one of the core issues in Web3:

“The gap between available technology and its real application”

NitroLayer bridges that gap.

KEY FEATURES

Main Network

NitroLayer operates on the Base network, chosen for its Coinbase-backed security, extremely low transaction fees, and fast execution. This provides a smooth, reliable, and scalable environment.

UNIFIED TOKEN: \$NILEX

- Official and exclusive token of the NitroLayer ecosystem.
- Initial supply: 1 trillion tokens.
- Deflationary token with automatic burns on every DEX buy and sell.
- Serves as a utility token across all ecosystem dApps and as a governance tool.
- dApps also contribute to token burns through continuous usage.
- Anti-bot system using automated penalties.

MULTI-CHAIN EXPANSION

- Ecosystem dApps can deploy on emerging or established EVM networks.
- No integration fees.
- Partnered networks receive 20% of dApp revenue generated on their chain, provided they actively promote the ecosystem.

SUSTAINABLE CAPITALIZATION

Revenue generated by the ecosystem is allocated to:

- Promotion and outreach
- Infrastructure and dApp expansion
- Continuous liquidity growth for the \$NILEX token

TOKEN ECONOMY

The \$NILEX token powers NitroLayer's financial engine. It's designed to combine deflationary mechanics with real, ongoing utility.

- Initial Supply: 1 trillion
- Burn Mechanism: Fee-based token burns on every DEX transaction, reducing supply and limiting bots.
- Utility: Used within multiple NitroLayer dApps, driving organic demand and reinforcing token value.
- Governance: Token holders influence key ecosystem decisions.
- Liquidity: Strategically distributed across reputable DEXes within the Base network.

PARTNERSHIP & WHITE LABEL MODEL

NitroLayer enables networks, companies, and communities to access high-quality decentralized tools through a personalized white label model:

- Ecosystem dApps can be licensed as white label solutions.
- Each deployment is tailored visually and functionally to the brand.
- 20% of the onboarding fee is directed to the \$NILEX liquidity pool.
- Optional ongoing maintenance and updates for integrated tools.

CONCLUSION

NitroLayer marks a new era of blockchain utility visionary, solid, and engineered for scale. With \$NILEX, the Base network, and an ever expanding suite of decentralized tools, NitroLayer brings emotion, utility, and reliability into the Web3 space.
